

WHY A MAGNETIC DIPSTICK?

As the metallic components in an engine wear, they generate particle debris that become suspended in the engine oil. OEM drain plugs aren't strong enough to clean these debris, leaving them to recirculate throughout the engine and causing premature damage.

Figurati Designs™ patented Magnetic Dipstick is the only dipstick that uses a powerful suspended Neodymium rare earth magnet which acts as a filter to contain these particles, keeping the oil cleaner and extending engine life.
