

INSTALLATION INSTRUCTIONS

Start by removing the factory torx head screw on the bottom outside edge of each factory grill.

Using your fingers, start to pry up on a factory grill to eventually have it come away from the inner fairing. You will see there are 2 white snap in clips on each of your new replacement grills. The factory grills are held in with the same style clips so you may have to use a bit of extra "oomph" to have the factory grills release. If you must use a tool, use something with a 90° end being especially careful not to scratch your inner fairing!

With the factory grills removed, the replacement grills will snap into place. Re-install the factory screws removed earlier and you are done!
