

# Trask Performance Down Under Exhaust System

The Trask **Down Under Exhaust System** is a high-performance, cost-effective, OEM replacement header designed for **2017 and up Harley-Davidson FL models**. Engineered for riders who demand more from their exhaust, this system delivers superior flow, performance, and durability.

Crafted from **premium stainless steel tubing**, each header is **hand TIG-welded and purged** to ensure maximum strength, precision, and long-lasting performance. The stainless construction not only resists corrosion but also **dissipates heat more effectively** than competitor systems, keeping your ride cooler and more efficient.

The Down Under system is **mandrel bent** for unrestricted exhaust flow and features **CNC-machined exhaust port flanges** for improved sealing and optimized exhaust flow. This results in a more positive seal at the exhaust ports, reduced turbulence, and a noticeable performance gain.

While it installs as a **direct replacement for the OEM header**, this system is designed for riders looking for more power. The **catalytic converter has been deleted** to further reduce restriction and unlock the full potential of your engine.

For a seamless factory look, the Down Under system is **compatible with stock Harley-Davidson heat shields** (sold separately).

- Direct OEM replacement for 2017+ Harley-Davidson FL models
- High-flow, true performance header design
- Hand TIG-welded, purged, and mandrel-bent stainless construction
- CNC-machined exhaust ports for increased flow and superior sealing
- Deletes catalytic converter for maximum performance gains
- Uses factory heat shields (not included)
- Designed, tested, and built in the USA

**RACE APPLICATION ONLY**
